The Online Banner Printing Service!

## Still Burying Your Rubbish?

**Banners for Advertising Print can help you stop your dirty habits**

For years PVC has been produced for a myriad of products, In horticulture and agriculture the main usages have been for protecting crops, root barriers etc. Marquees and many other structures are predominantly made from supported PVC.

In green events like sailing, athletics, agricultural shows, exhibitions and conferences, banners and backdrops are to be seen everywhere. The material used has no equal and is easy to maneuver and good to print on. The material supported PVC (Supported by Polyester) has been notoriously difficult to recycle.

This material has joined the thousands of tons of supported PVC material consigned to landfill sites or worse each month. By not recycling, more material needs to be produced exhausting finite resources and consuming huge quantities of energy.

Those in the know in the recycling industry forecast a government or EU ban on dumping this toxic waste. This ruling would be similar to the ruling on dumping tires, a blanket ban.

After years of study and expense Banners for Advertising can now guarantee a solution to this out moded practice of burying rubbish. All banners and backdrops printed by Banners for Advertising may now be recycled if the client wishes.

Each consignment is recycled and the paperwork produced is to Government best practice. The consignee is issued with a certificate outlining the process and this is kept for a minimum of two years so that the processes may be checked and verified.

The material is recycled and used for a variety of purposes in the UK.

Banners for Advertising have heard of companies claiming to recycle when clearly they do not. A certificate with a paper trail is the only guarantee of the recycling process.
